wikipedia.org/wiki/Nginx

NGINX

How to use this image

Hosting some simple static content

```
$ docker run --name some-nginx -v /some/content:/usr/share/nginx/html:ro -d nginx
```

Alternatively, a simple `Dockerfile` can be used to generate a new image that includes the necessary content (which is a much cleaner solution than the bind mount above):

```
FROM nginx
COPY static-html-directory /usr/share/nginx/html
```

Place this file in the same directory as your directory of content ("static-html-directory"), run `docker build -t some-content-nginx .`, then start your container:

```
$ docker run --name some-nginx -d some-content-nginx
```

Exposing external port

```
$ docker run --name some-nginx -d -p 8080:80 some-content-nginx
```

Then you can hit `http://localhost:8080` or `http://host-ip:8080` in your browser.

Complex configuration

```
$ docker run --name my-custom-nginx-container -v /host/path/nginx.conf:/etc/nginx/nginx.conf:ro -d nginx
```

For information on the syntax of the nginx configuration files, see the official documentation (specifically the [Beginner's Guide](#)).

If you wish to adapt the default configuration, use something like the following to copy it from a running nginx container:

```
$ docker run --name tmp-nginx-container -d nginx
$ docker cp tmp-nginx-container:/etc/nginx/nginx.conf /host/path/nginx.conf
$ docker rm -f tmp-nginx-container
```

README.md

About this Repo

This is the Git repo of the official Docker image for [nginx](https://nginx.org). See the Hub page for the full readme on how to use the Docker image and for information regarding contributing and issues.

The full readme is generated over in [docker-library/docs](https://github.com/nginxinc/docker-library/docs), specifically in [docker-library/docs/nginx](https://github.com/nginxinc/docker-library/docs/nginx).

The changelog for NGINX releases is available at [nginx.org changes page](https://nginx.org/changelog).
